Good afternoon,

Hawaii Department of Agriculture is adding the active ingredient thiamethoxam to Hawaii's list of State Restricted Use Pesticides. There is currently one product under your purview that has this active ingredient, Raid Ant Gel, EPA Reg. No. 100-1261-4822. This product can continue to be registered as a general use product until 12/31/2022 and if you wish the product to be renewed, then it will be as a State Restricted Use Product.

Let me know if you had any questions.

Esther Riechert
